
A conversion probability
P(convert within horizon)
minority fraction f
L = 32
L = 64
L = 128
L = 256
L = 512
≥100-cell cluster seen
B dispersion collapse
CV of conversion time
lattice size L
f = 0.155
f = 0.16
f = 0.17
f = 0.18
f = 0.2
CV ∝ N^(-1/2)
C conversion time saturates
median conversion time (steps)
lattice size L
D all sizes collapse (n = 2.22)
fraction converted to Sell
rescaled time K·t
L = 64
L = 128
L = 256
L = 512
1 − exp(−u^2.22)
